

S1 - ChArUco 5 x 4, DICT_APRILTAG_36h11, marker ids 210..219

Nominal: square 16 mm, marker 12 mm, board 80 x 64 mm (12 corners).

PRINT AT 100 % (actual size, no fit-to-page / scaling). Mount flat on a rigid plate.

Pre-scaled x1.0417 for the printer in use (config [plates] print_scale): the scale bar must measure 100 mm on paper - if it does not, set print_scale and regenerate.

Cut along the dashed line (16.0 mm white margin around the board, crop marks at the corners): the cut-out fits the engraved rectangle on the MDF plate.

Check the scale bar with a ruler, measure the board width over all 5 squares (nominal 80 mm) and enter the measured square size in config/station.toml (0.1 % scale error = 0.32 mm depth error at 320 mm).

Board frame (OpenCV 4.14 CharucoBoard): origin = top-left outer corner (crosshair), x right, y down, z into the board.

A4 portrait, generated 2026-10-05 by tools/print_targets.py, OpenCV 4.14.0.
